

## Instant Messaging with TomTom Work

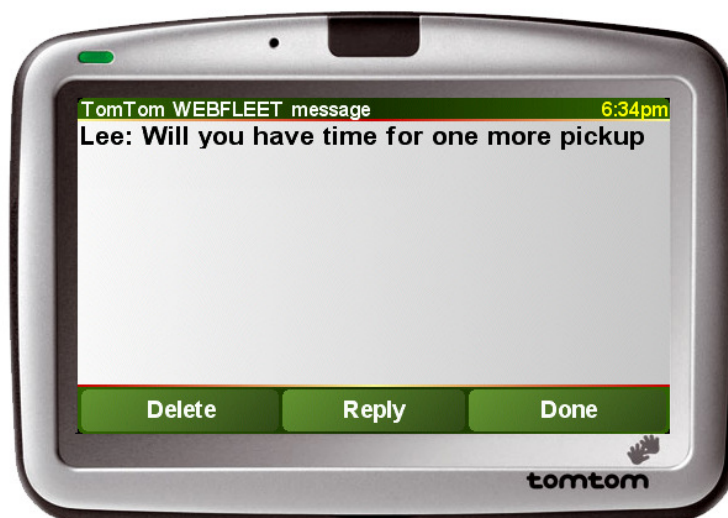

Messenger.connect enables you to monitor and communicate with your fleet with the ease of Windows Live Messenger.

With Messenger.connect, you can send an instant message to one of your Go units by selecting the unit from your list of contacts in Windows Messenger and then type and send the message as you would to any other contact. The message is instantly sent as a text message to the Go unit.

Whatever is typed in Windows Messenger ...

is sent to the corresponding Go unit as a text message

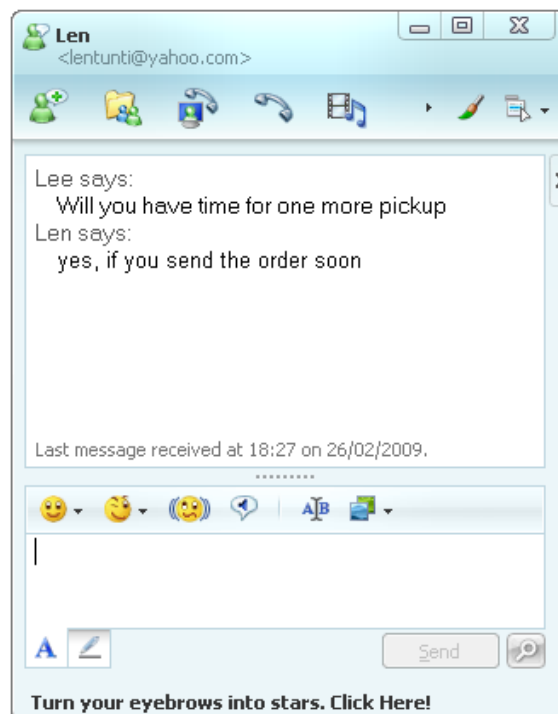

# Messenger.connect from **Connect Fleet**

If the driver replies by reporting to the office with a text message from their Go unit, the message is displayed as an instant message within Windows Messenger.

Whatever is typed into the Go unit as a text message ...

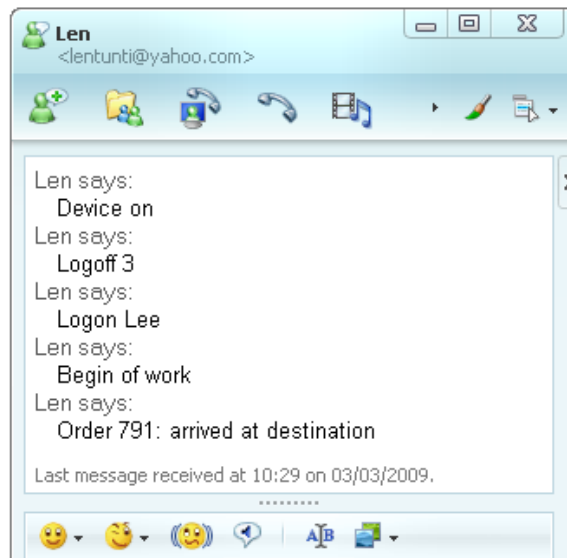

is displayed in Messenger as an instant message

# Messenger.connect from **Connect Fleet**

Also, Messenger.connect can be used for much more than messaging – You can monitor all TomTom Work messages through the Windows Messenger interface as Messenger.connect allows you to select any message type to be reported back to the office. So, for instance, you could choose to see all trip messages from your Go units, or all order messages or all messages: -

All messages are displayed in Windows Messenger

Messenger.connect also works with Windows Messenger on smart phones. This means that you can communicate and monitor your fleet whilst on the move: -

Keep up with your fleet whilst on the move
